

SYMBIOSIS INSTITUTE OF TECHNOLOGY, NAGPUR

Symbiosis International (Deemed University)

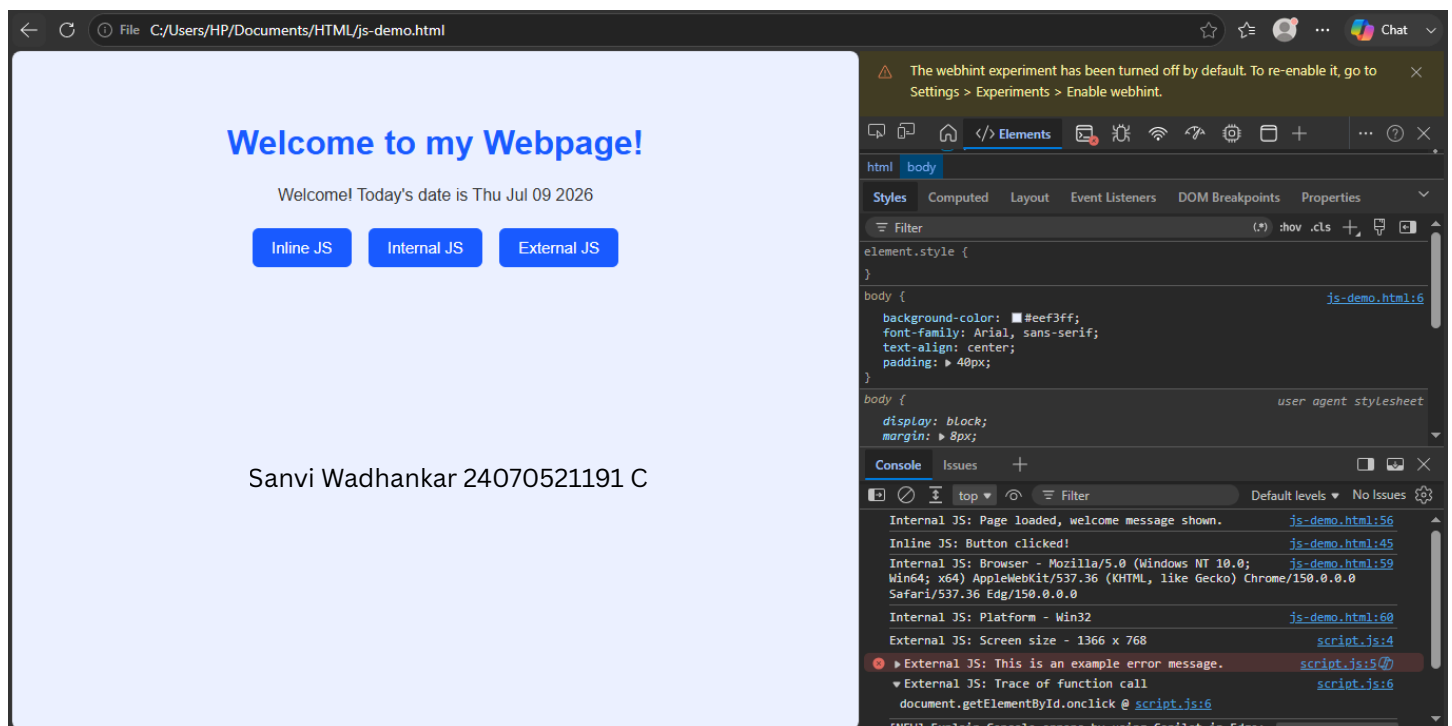

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category – I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

Practical 1

AIM:- Demonstrate inline , external , internal JavaScript; use console methods; create a webpage showing user info and a welcome message

Theory:-

What is JavaScript ?

JavaScript is a versatile, dynamically typed programming language that brings life to web pages by making them interactive. It is used for building interactive web applications and supports both client-side and server-side development.

Types of JavaScript

There are three main ways to add JavaScript to an HTML file:

- **Internal JavaScript:** Written directly inside the HTML file using the `<script>` tag.

- **External JavaScript:** Written in a separate .js file and linked to the HTML file using the src attribute of the <script> tag.
- **Internal JavaScript:** refers to embedding JavaScript code directly within the HTML file using <script> tag, either inside the <head> or <body> tag. This method is useful for small scripts specific to a single page.

Code:-

HTML file:-

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>JS Demo</title>
```

```
<style>
```

```
  body {
```

```
    background-color: #eef3ff;
```

```
    font-family: Arial, sans-serif;
```

```
    text-align: center;
```

```
    padding: 40px;
```

```
  }
```

Conclusion:-

Hence we have performed a javascript practical to understand the inline, external and internal type of js.
